

Continuation of 11. does NOT place the application in condition for allowance because: Applicants arguments filed 04/02/2007 have been fully considered but they are not persuasive. Applicant's argue that the Jacob's reference, as modified by the Jeong reference does not teach an air handler fan speed based on a detected temperature within the air handler has an electronic controller configured to control an operating speed of an air handler fan based on a detected temperature within the air handler. As noted in the Final rejection, while Jacob's teaches the majority of the limitations, Jeong specifically teaches a freezer fan whose speed is adjusted based on a detected temperature in the freezer compartment (C-4, L-15-30). Thus, Jacobs, as modified by Jeong, clearly teaches this limitation and the rejection is proper and remains.
